Downtown Bridge Street benches to be temporarily removed

The Borough of Phoenixville will be without benches for about a month because of a corrosion problem on the foot pedestals of the benches. The benches are being removed and sent back to Keystone Designs located in Butler, Pennsylvania for a total stripping and repainting with an upgraded coating. The benches were put in during phase one and phase two of the downtown streetscape project and benches from each of the phases have experienced the similar problems. Additionally there will be “protective feet” to buffer the bench from the brick sidewalk. The work is covered under warranty and there is no cost to the Borough. The benches will return in approximately one month and will then be installed in the same locations throughout the downtown.
